NEUROMARKETING RESEARCH POSTER — CROSS-CULTURAL STUDY

THEORY & BACKGROUND

Trompenaars' Cultural Dimensions

This study employs **Trompenaars' Seven Dimensions of Culture** to compare how **Nordic (Finnish)** and **Mediterranean (Italian)** consumers react to eco-friendly social media advertising.

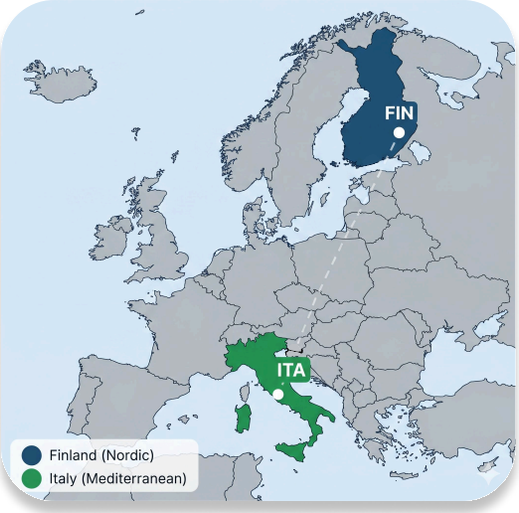
- Universalism vs. Particularism
- Neutral vs. Affective
- Individualism vs. Collectivism
- Sequential vs. Synchronic Time

FINLAND

High universalism, reserved emotional expression, long-term sustainability orientation.

ITALY

High affectivity, expressive culture, community-driven eco-values and particularism.



INNOVATIVE METHODOLOGY

Beyond Surveys

Tested **Millennials & Gen Z** using Neuromarketing tools — eliminating *social desirability bias* that distorts traditional questionnaires.

Social Desirability Bias — Eliminated

Participants cannot fake physiological responses. Eye movements & facial muscle activity reveal true subconscious attitudes.

Neuromarketing

Replaced self-report surveys with objective physiological measurement to capture authentic subconscious consumer behavior.

Eye-Tracking

Precisely tracked visual attention & fixation paths on eco-friendly posts — revealing which elements attract gaze first and longest.

Facial Coding

AI-powered micro-expression analysis captured raw emotional reactions (joy, contempt, surprise) bypassing bias entirely.

n = 68	6 Posts	30s/post	2 Countries
